PROFESSIONAL SUMMARY

Frontend Developer with ~5 years of experience building scalable Angular applications in enterprise environments. Strong expertise in RxJS and NgRx for reactive, state-driven architectures, including offline-capable applications, complex data workflows and reactive forms. Experience in performance optimization and code base simplifications, delivering improvements of up to 50%, while building high-quality solutions in international and distributed teams. Experienced with CI/CD pipelines and cloud-based environments.

TECHNICAL SKILLS

- Frontend: Angular, TypeScript, RxJS, NgRx, JavaScript, HTML5/CSS3/SASS
- Backend: .NET, PHP
- Testing: Cypress, Jasmine, Karma
- Tools & Platforms: Azure DevOps, GitHub, GitLab, Git, CI/CD, Azure Portal, SonarQube, Visual Studio Code, Visual Studio, GitHub Copilot
- Other: Performance Optimization, REST APIs, Swagger, Postman, PDF Generation, UI/UX, Agile

PROFESSIONAL EXPERIENCE

Frontend Web Developer

Vestas November 2022—Present, Leça do Balio, Portugal

- Engineered scalable, modular frontend architectures for Azure-hosted enterprise Angular internal applications regarding plant performance and reporting
- Collaborated within international and distributed teams, and contributed across multiple projects in a shared service system
- Designed and implemented complex, data-driven form systems using Angular Reactive Forms and Form.io, supporting dynamic form rendering, validation, and enterprise user workflows
- Architected offline-first capabilities using NgRx and indexedDB, ensuring 100% data persistence for field technicians in low-connectivity areas and reducing server-side state requests by 40%.
- Improved application performance and maintainability by refactoring a complex codebase, enhancing usability across offline and online scenarios
- Elevated codebase reliability by increasing test coverage by 35% and implementing SonarQube quality gates, which decreased post-deployment bug reports by 15%
- Implemented end-to-end testing using Cypress, improving reliability and reducing regression risk
- Led the integration of 50+ RESTful endpoints using TypeScript interfaces and Swagger-generated clients, eliminating runtime data errors and ensuring 100% contract compliance between frontend and .NET services
- Managed CI/CD pipelines, versioning, and deployment workflows using Azure DevOps

Frontend Web Developer

Capgemini January 2021—August 2022, Fundão, Portugal

- Developed and maintained Angular applications using TypeScript, delivering features across multiple enterprise projects
- Enhanced UI/UX and implemented new features across multiple projects, aligning with business and user requirements
- Conducted code reviews and implemented unit tests, maintaining high code quality and consistent test coverage (~80%)
- Collaborated in international and distributed teams following Agile methodologies
- Designed and implemented user interfaces using Angular Material, including work on an automotive sector project focused on usability and consistency
- Improved frontend performance and interactivity by over 50% by optimizing API usage and reducing unnecessary calls
- Contributed to the development of a mobile Progressive Web App (PWA) for internal use, ensuring responsive and cross-device compatibility
- Integrated and maintained chatbot functionality using IBM Chatbot, enhancing user interaction and automation within the application
- Contributed to backend (.NET) and database when required, supporting full-stack delivery in cross-functional teams

PROJECTS

Personal Portfolio Website

- Developed a high-performance interactive portfolio using Three.js and Angular, for mobile and desktop devices
- Technologies: Angular, TypeScript, Three.js, HTML5, CSS3

EDUCATION

Bachelor's Degree in Computer Science

University of Beira Interior - Covilhã, Portugal • 2019
